

**Another DBIA Core Course that should be part of any Design-Build educational foundation!  
One of three courses required for the Designated Design-Build Professional™ designation.**

# Fundamentals of Project Delivery

***Get the basics right – and the rest comes easy!***

**This course will provide a comprehensive overview** of what are considered four of the major project delivery systems utilized in today's marketplace – **design-build, design-bid-build, contract management at-risk, and multi-prime**. Each method is reviewed in detail with a review of some major advantages, as well as pitfalls, of each method. The information in this course is **essential knowledge for all owners and practitioners** utilizing any, or all, of the project delivery methods noted above.

**Key topics to be discussed include:**

- History of Project Delivery Systems
- Procurement Methodologies
- Selecting Criteria Drivers
- Choosing the Right Project Delivery System
- Attributes of Project Delivery Systems
- Contracting Approaches
- Ensuring Success

**At the end of this course, students will be able to:**

- Explain the history and evolution of project delivery systems and define system terms.
- Define procurement, describe the various procurement methods, and explain how to choose the procurement method best suited for a given project.
- Describe the framework for project delivery, including major owner decisions and business goals.
- Explain how to select an appropriate project delivery system.
- Describe the four common types of contract structures and explain how to select an appropriate payment method.
